

DX5 Rugged 5-Channel DSMR System with SR515

SPM5200EU

The Spektrum DX5 Rugged 5-channel surface system redefines radio control with unmatched innovation in durability that no off-roader, basher or boater will want to be without. The result is precision control, convenience, and “rugged” versatility.

We started with a chassis based on the superb Spektrum ergonomic design found on the popular DX5C and competition favorite DX5 Pro. From there, we integrated cordless power tool feature ideas for the die-hard punishment those products endure. The result is a class-leading RC system with unmatched durability in addition to other innovative features that unite with a level of precision, versatility and convenience you won’t want to drive without.

The DX5 Rugged is built around frequency-agile, DSMR 2.4GHz technology. This exclusive Spektrum technology can be used in any type of surface application, including boats. Its range and response, particularly in noisy 2.4Ghz environments, are superb. It’s also backwards compatible with DSM2 and marine-specific Spektrum receivers (DSMR Version). This means long time Spektrum users can continue to use the receivers they have.

Included with the DX5 Rugged System (SPM5200EU) is our most compact and user friendly receiver, the SR515 5 Channel DSMR Receiver. Built into The SR515 is our newest failsafe mode for surface applications, Gas Mode Failsafe. Easily selectable during binding, Gas Mode allows users to preset the failsafe position of all available channels. Another bonus is the outstanding range and super low 5.5ms latency that this receiver provides.

TARGET DEALERS

Spektrum retailers that support the surface line of Spektrum transmitters. Retailers will appreciate being able to offer their customers a new model with a the unique look and feature set.

TARGET CUSTOMERS

Mid-level, price conscious recreational surface consumers looking for transmitter with high end feature/performance levels at an affordable price. The unique look will further entice new and repeat customers to take a second look at the Rugged.

KEY FEATURES**UNMATCHED DURABILITY**

Starting with a chassis based on a superb Spektrum ergonomic design, we were inspired by the punishment capability of cordless power tools, and translated their die-hard engineering to the specific needs of the RC driver. The result is a shock-absorbing rubberized bumper design that surrounds the transmitter chassis to form a level of protection never offered before on a surface transmitter.

**NEW USER FRIENDLY FEATURES**

The DX5 Rugged stands out as a transmitter platform that means business handling the wildest terrain, the toughest conditions and fierce competition without any worry. That's why we designed durability hand-n-hand with convenience. A built-in side compartment offers tool storage, and two lanyard mounts (one rubber, one molded into the chassis) are supplied so you can be hands-free in an instant.

**BREAKTHROUGH STEERING CONTROL**

The aggressive off-road steering wheel tread helps the precision of Spektrum technology to also deliver a tactile feel even if you're crawling, bashing or boating in harsh conditions. The integrated thumb-lever innovatively makes it possible to steer one-handed safely and with a higher-level of precision.

OTHER PRODUCT FEATURES

- Bold styling that's aggressive with a focus on class-leading durability
- Inspired by the ergonomically-recognized Spektrum DX5 Pro and DX5C transmitters
- Water-resistant* chassis design protects against minor splashes
- Dual lanyard mounts provide radio safety and accessibility
- Surrounded rubber-bumper chassis protection
- Built-in front chassis guard offers user-inspired accessory mounting options
- Simple capacitive-touch control panel responds to the touch of your finger
- Intuitive software based on user-tested functionality that's clean and simple
- Innovative thumb-steering lever makes one-hand operation safer and more precise
- Non-slip removable rubber hand grip and off-road treaded steering wheel
- Built-in telemetry capability (telemetry compatible devices sold separately)
- Convenient built-in tool storage compartment
- Large easy-to-read LCD screen
- Five-channel, full-proportional versatility
- Frequency-agile, Spektrum™ DSMR 2.4GHz technology
- Program and fine-tune compatible receivers with AVC technology
- Steering mix, 4-wheel steering mixes, Motor-On-Axle (MOA), plus one assignable mix
- Bind-progress screen displays status and frame rate
- Includes the compact Spektrum SR515, 5-channel DSMR sport receiver

WHAT'S INCLUDED

SPM5200	DX5 Rugged 5 Channel DSMR Transmitter
SPMSR515	SR515 5 Channel DSMR Receiver
	4 AA Alkaline Batteries

OPTIONAL ACCESSORIES

SPM9049	Spektrum Lanyard/Neck Strap
SPMB2000LITX	2000mAh Transmitter Battery
SPM6834	Spektrum Charge Adapter

Item#
SPM5200
