

INTEGRATED SOPHISTICATION

Many customers have utilized our industry leading software functionality that Castle Link offers. When paired with a Castle Creations sensor supported ESC, like the MAMBA MAX PRO or MAMBA MONSTER X, you can unlock advanced tuning capabilities that Castle Link provides specifically for sensored motors.

**SMART
SENSE**

SMARTSENSE™ uses the motors sensors to start the motor to provide excellent torque and low-speed drivability. Once the motor is turning it seamlessly transitions to Castle's **ULTRA- EFFICIENT** sensorless mode. When running, a motor must transition between different load points and a different timing advance is required for optimal efficiency at each. Using mechanical timing adjustments alone, you can only target one driving condition, such as higher start power or higher top end speed. This sacrifices performance and efficiency during the other driving phases. Electronic timing in **SMARTSENSE™** will advance timing automatically for peak performance during all driving conditions. This allows users to combine the best of both worlds in an unrivaled hybrid between smooth sensored startups and high efficiency sensorless drive.
